

### APPLICATION

Directional spool valves type **WMM22...** hand lever operated are intended for change in direction of fluid flow in a system and thus it allows to change direction of movement of a receiver - mostly piston rod of a cylinder or hydraulic motor as well to use functions: *on* and *off*. These directional spool valves are used for subplate mounting in any position in a hydraulic system.

### DESCRIPTION OF OPERATION

Annular ports are made around the longitudinal bore in the housing (1) and connected to its cavity. Directional valve is switched by shifting the spool (2) into one end position. Various control functions result directly from the shape of the spool (2) which affects the change in configuration of the connections between ports **P**, **T**, **A** and **B** in the housing (1). Mating surfaces between the valve and a subplate are sealed with rings. Movement of the spool (2) is caused by a

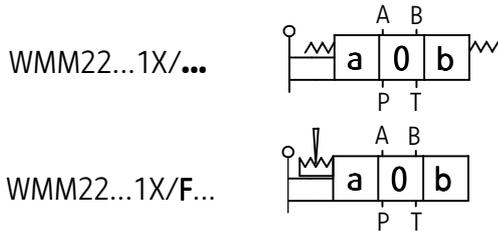

change in position of the hand lever (3) by means of the pin (4) and the plunger (5). The spool return into rest position is caused by the springs (6) – versions **WMM22.../...** or by spool positioning which is possible by using detent (7) – versions **WMM22.../F**. 3-position directional spool valve can be equipped with the limit switch of spool position control: normally-closed – version **WMM22/...19**, normally-open – version **WMM22/...23**.

### Flow limits

#### 2 and 3-position directional control valves, springs centered

spool type	pressure $p$ [MPa]				
	7	14	21	28	35
	flow $Q$ [dm <sup>3</sup> /min]				
E, J, L, M, Q, R, U, V, W	450	450	370	320	300
G, H, S, T, F, C, D, K, Z	265	190	155	135	120

#### 2 and 3-position directional control valves with detent

spool type	pressure $p$ [MPa]				
	7	14	21	28	35
	flow $Q$ [dm <sup>3</sup> /min]				
all spool types	450	450	370	320	320

### NOTE:

Above flow limits are related to standard application of 4-way directional control valve using two flow directions, e.g. **P** to **A** and simultaneously **B** to **T**. When 4-way directional control valve with only one flow direction is used, e.g. **P** to **A** (**B** plugged) or **A** to **T** (**B** plugged), then the actual flow limits are considerably lower.

## EXAMPLE OF APPLICATION IN HYDRAULIC SYSTEM

### SUBPLATES AND MOUNTING BOLTS

Subplates for directional spool valve type **WMM22...** should be ordered according to data sheet **WK 491 800**.  
Subplate types:

G151/01 - threaded connections	P, T, A, B - G 1
	X, Y, L - G1/4
G151/02 - threaded connections	P, T, A, B - M33 x 2
	X, Y, L - M14 x 1,5
G154/01 - threaded connections	P, T, A, B - G 1 1/4
	X, Y, L - G1/4
G154/02 - threaded connections	P, T, A, B - M42 x 2
	X, Y, L - M14 x 1,5
G156/01 - threaded connections	P, T, A, B - G1 1/2
	X, Y, L - G1/4
G156/02 - threaded connections	P, T, A, B - M48 x 2
	X, Y, L - M14 x 1,5

Subplates and bolts mounting directional control valve **M12 x 60 - 10,9** in accordance with **PN - EN ISO 4762** 6 pcs/kit should be ordered separately.  
Tightening torque for bolts **Md = 105 Nm**
