

DATA SHEET - SERVICE MANUAL

APPLICATION

Pressure relief valves type DB... serve to limit pressure in a hydraulic system or in its part, while in version DBW... with pilot valve it is also used to unload pressure in a system. Application example:

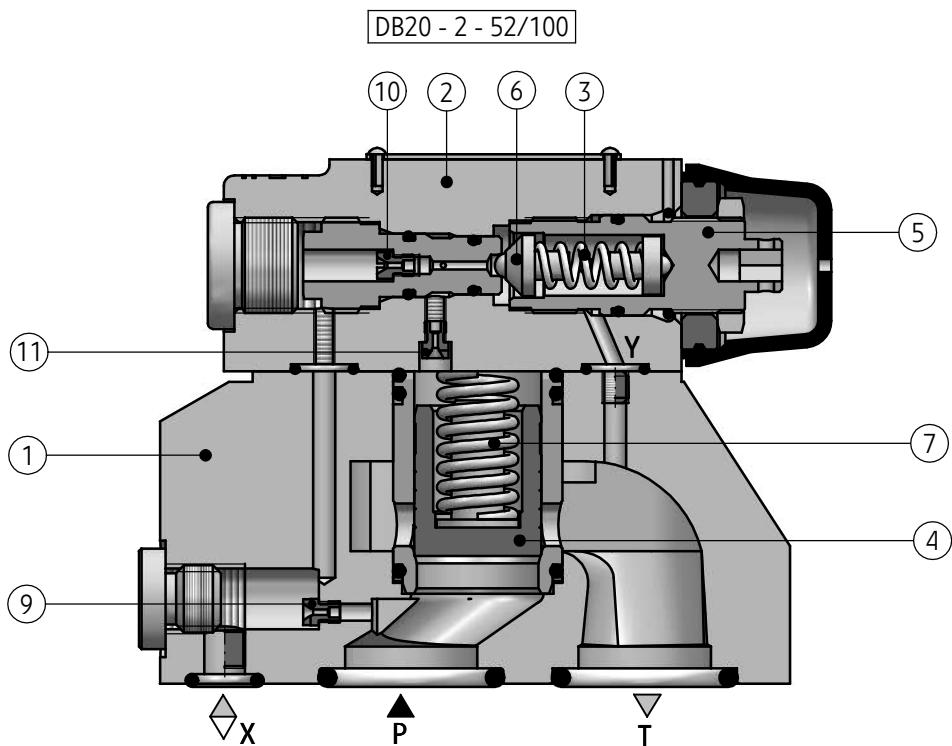

- DB... for setting up maximum pressure in a system
- DBW... for actuation of a pump without pressure

The valve is complied with the regulations of directive 2006/95/WE for the following voltages:

- 50 – 250 V for AC
- 75 – 250 V for DC

DESCRIPTION OF OPERATION

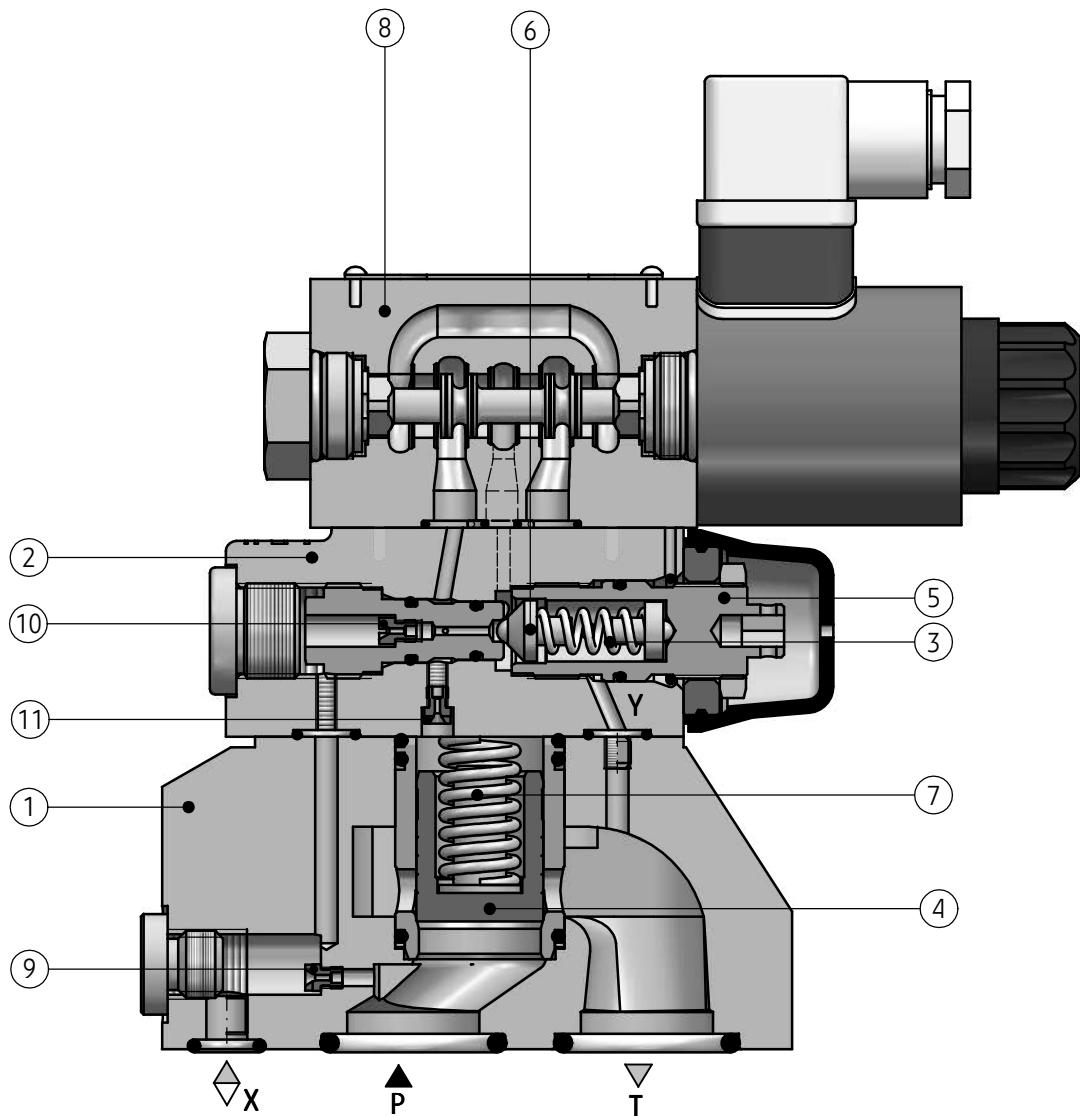

Pilot operated pressure relief valve type DB... consists of the pilot valve (2) and the main valve (1). Pressure in a system through line **P** affects the lower side of the spool (4) and via jets (9), (10), (11) also affects its upper side and the poppet (6) of the pilot valve. At standstill, the pressure is equal on both sides of the spool. A spring (7) holds the spool (4) in the starting position. Lines **P** and **T** are separated from each other. If pressure in a system reaches the value set by the position of the

adjustment element (5) and tension of the spring (3) of the pilot valve, the pilot poppet (6) opens and fluid flows via jets (9) and (10) and opened pilot valve (2) to a tank. The flow of control stream causes pressure drop at jets (9) and (10). In effect pressure acting on the lower side of the spool (4) is greater and the spool moves upwards, what allows excess fluid to be drained to a tank and pressure in a system to be limited to the set value.

DESCRIPTION OF OPERATION

DBW20...A - 2 - 52/100

Pressure relief valve is also available in version with forced (electrically) pressure unloading. Pilot valve (8) in form of a directional valve shuts off drain line before the pilot poppet in its starting position. The valve functions as described before. After switching directional valve (9) the chamber before the pilot

poppet is connected to drain line (connected to a tank). The unloaded spool (4) moves upwards opening connection between P and T. The valve is available in two versions depending on the pilot valve (8): closed in de-energized position – version DBW...A... or opened in de-energized position – version DBW...B....

TECHNICAL DATA

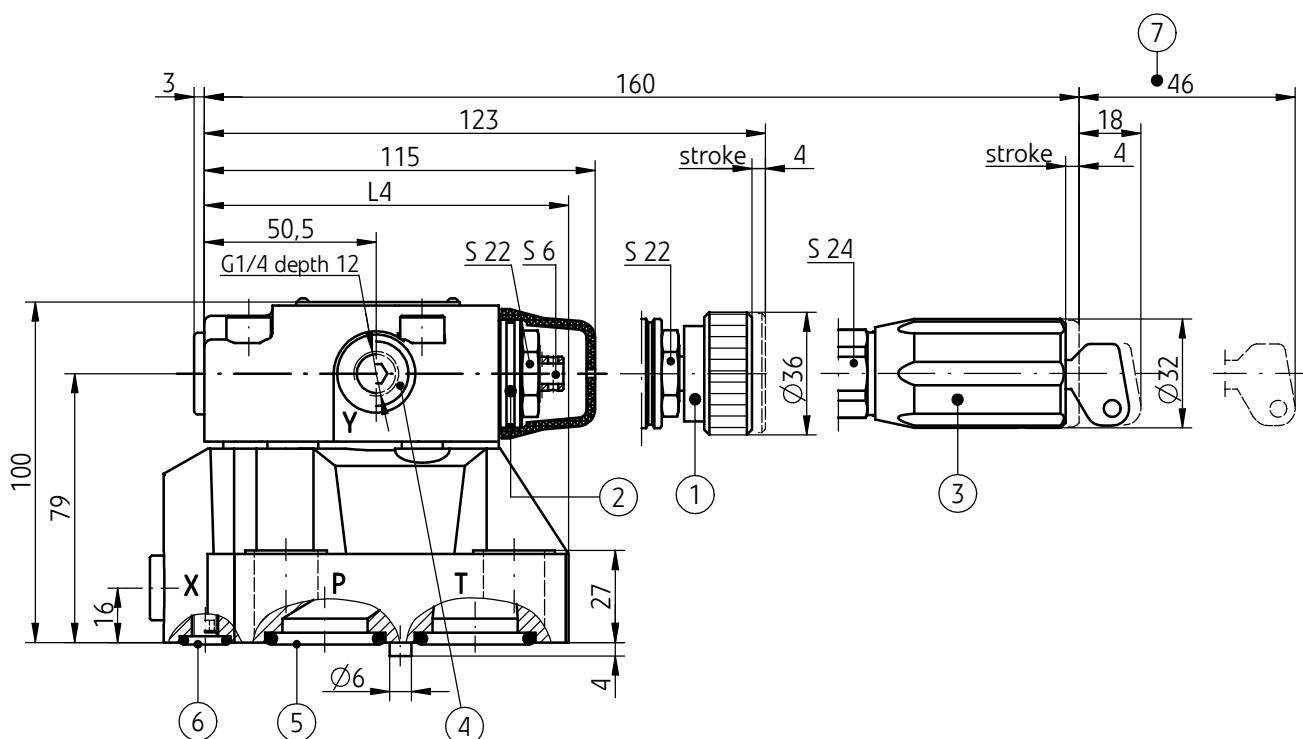

Hydraulic fluid	mineral oil							
Required filtration	up to 16 µm							
Recommended filtration	up to 10 µm							
Nominal fluid viscosity	37 mm ² /s at temperature 55 °C							
Viscosity range	2,8 up to 380 mm ² /s							
Fluid temperature range (in a tank)	recommended	40°C up to 55°C						
	max	-20°C up to +70°C						
Ambient temperature range	version DB...	-20°C up to +70°C						
	version DBW...	-20 °C up to +50°C						
Maximum operating pressure	35 MPa							
Maximum pressure in lines Y, T	version DB...	31,5 MPa						
	version DBW...	21 MPa						
Minimum setting pressure	0,5 MPa							
Maximum setting pressure	35 MPa							
Maximum flow rate	nominal size	NS10		250 dm ³ / min				
		NS20		500 dm ³ / min				
		NS30		650 dm ³ / min				
Weight	nominal size	version						
		DB...	DBG...	DBW...	DBWG...	DBC...	DBWC...	
		NS10	3,1 kg	4,9 kg	4,7 kg	6,5 kg	1,5 kg	3,1 kg

Type of a directional valve (only for versions DBW... ; DBW...G; DBWC...)	WE6... according to data sheet WK 499 502							
Nominal supply voltage for solenoid	DC			AC (plug-in connector with rectifier)				
	12V	24V	110V	230V - 50Hz	110V - 50Hz			
Supply voltage tolerance	±10%							
Power requirement (DC)	30 W							
Insulation	IP 65							
Temperature of solenoid coil	max 150 °C							

ASSEMBLY AND APPLICATION REQUIREMENTS

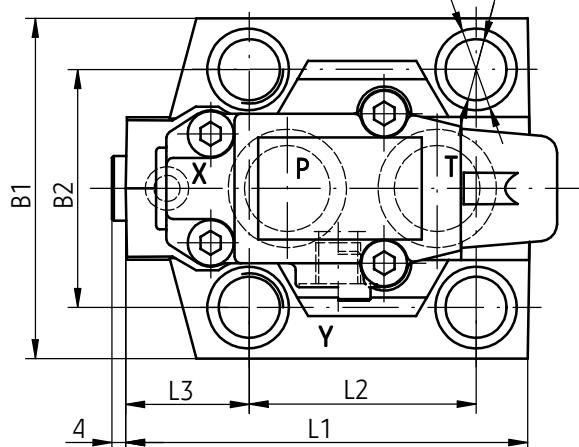

1. Only valve working properly and suitably installed may be connected to an electric system. Only skilled workers are allowed to connect and disconnect electric system.
2. Ground connection (⏚) must be connected with protective earth wire (⏚ PE) in supply system according to appropriate instructions.
3. It is forbidden to apply the valve if the supply cable in the gland of plug-in connector is not properly tightened.
4. It is forbidden to apply the valve if the plug-in connector is not properly tightened to the solenoid socket and is not secured by screwing bolt tightly.
5. Due to heating solenoid coil, the valves should be placed in order to eliminate the possibility of incidental touch while using, or, they should be equipped with the coil covers (in accordance with the European standards PN - EN ISO 13732-1 and PN - EN 982).

OVERALL AND CONNECTION DIMENSIONS

versions for subplate mounting: DB10...; 20...; 30...

$\phi D2$ - 4 spotfaces
 $\phi D1$ - 4 holes

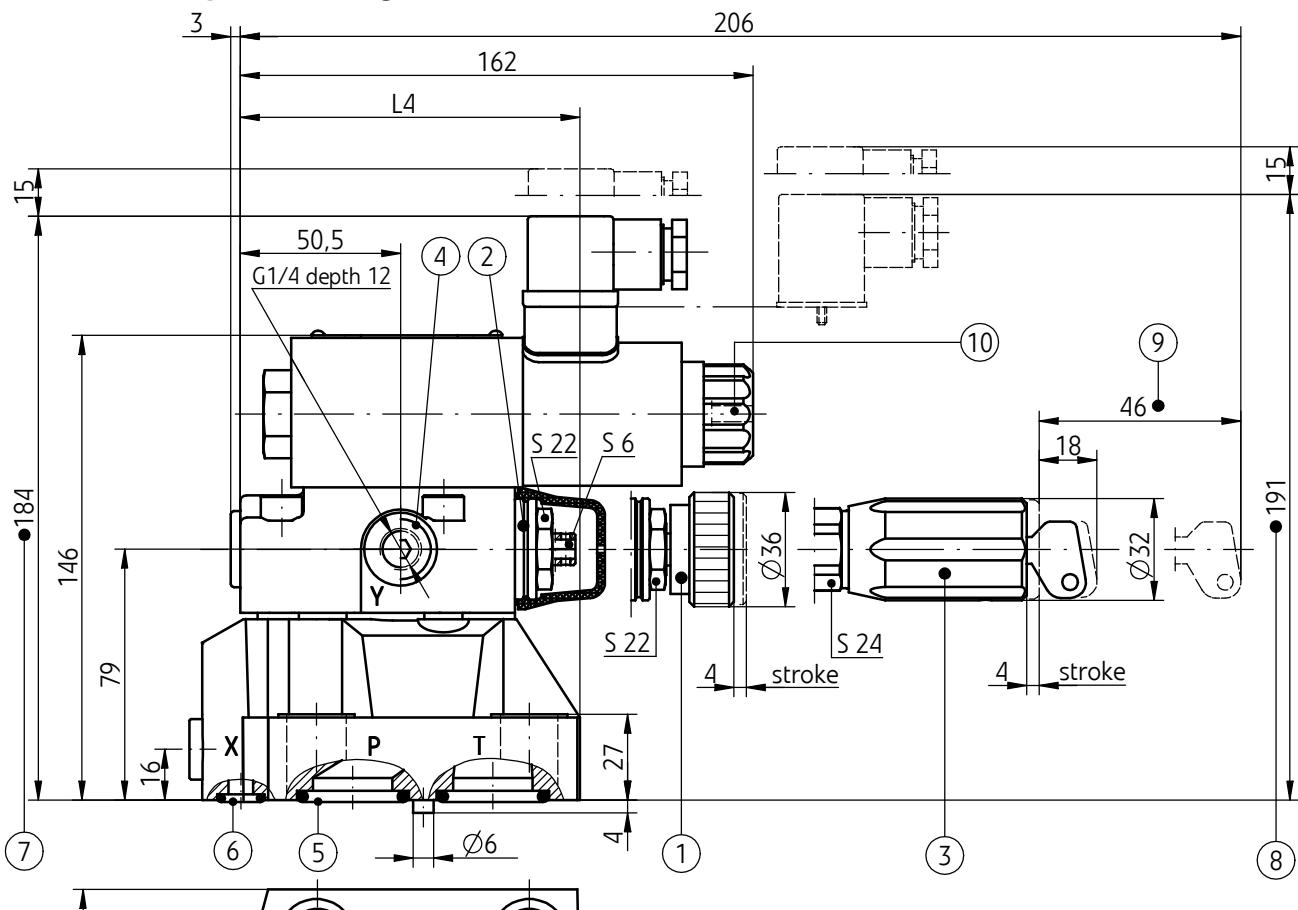

- 1 - Adjustment **1** (handknob)
- 2 - Adjustment **2** (set screw with hexagon socket)
- 3 - Adjustment **3** (lockable handknob)
- 4 - Additional external port **Y** (plug G1/4 does not occur in versions: DB.../...Y... ; DB.../...XY...)
- 5 - Sealing ring o-ring - 2 pcs/kit (**P, T**) - according to table
- 6 - Sealing ring o-ring - 1 pcs/kit (**X**) - according to table
- 7 - Space required to remove the key from the lock of the adjustment item 3

HOW TO ORDER

HOW TO ORDER

							*						
						Further requirements in clear text (to be agreed with the manufacturer)							
						Sealing NBR (for fluids on mineral oil base) = no designation FKM (for fluids on phosphate ester base) = V							
						Electrical connection (only for versions DBW... DBW...G... DBWC...) Plug-in connector DIN 43650-A/ISO4400 without LED = Z4 Plug-in connector DIN 43650-A/ISO4400 with LED = Z4L							
						Manual override for solenoid (only for versions DBW... DBW...G... DBWC...) solenoid without manual override = no designation solenoid with manual override = N							
						Supply voltage for solenoid (only for versions DBW... DBW...G... DBWC...) 12V DC = G12 24V DC = G24 110V DC = G110 110V AC 50Hz (plug-in connector with rectifier) = W110R 230V AC 50Hz (plug-in connector with rectifier) = W230R							
						Pilot oil supply and pilot oil drain (only for versions DB...; DBW...) internal pilot oil supply, internal pilot oil drain = no designation external pilot oil supply, internal pilot oil drain = X internal pilot oil supply, external pilot oil drain = Y external pilot oil supply, external pilot oil drain = XY							
						Cracking pressure of the main valve (not applicable for versions DBC...; DBWC... without the main spool) standard = no designation low = U							

NOTES:

The valve should be ordered according to the above coding.

The symbols in bold are preferred versions in short delivery time.

Coding example: DB10 G2 - 52/100 U

SUBPLATES AND MOUNTING BOLTS

Subplates for particular versions of valve should be ordered according to subplate type, taking into the account the size of thread connections given in the table below.

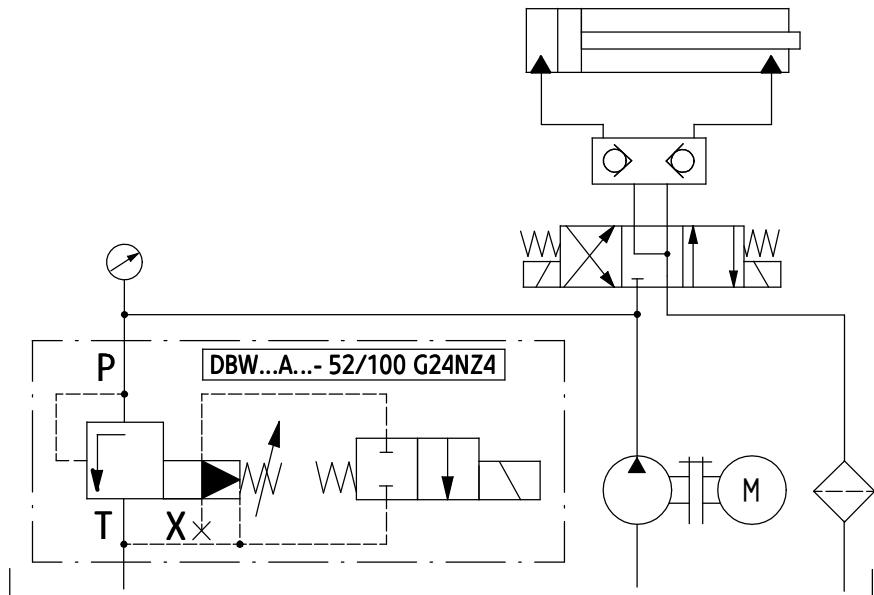

Subplates and mounting bolts must be ordered separately.

NOTE:

Subplate symbols in bold are preferred versions in short delivery time.

Valve type	Subplate type Data sheet	Thread connections of the subplate	Mounting bolts
DB10...; DBW10...	G406/01 WK 470 013	P, T - G 3/8 X - G 1/4	M12 x 50 - 10.9 - 4 pcs/kit in accordance with PN -EN ISO 4762 tightening torque Md = 120 Nm.
	G407/01 WK 470 013	P, T - G 1/2 X - G 1/4	
DB20...; DBW20...	G408/01 WK 450 797	P, T - G 3/4 X - G 1/4	M16 x 50 - 10.9 - 4 pcs/kit in accordance with PN -EN ISO 4762 tightening torque Md = 310 Nm.
	G409/01 WK 450 797	P, T - G 1 X - G 1/4	
DB30...; DBW30...	G410/01 WK 470 473	P, T - G 1 1/4 X - G 1/4	M18 x 50 - 10.9 - 4 pcs/kit in accordance with PN -EN ISO 4762 tightening torque Md = 430 Nm.
	G411/01 WK 470 473	P, T - G 1 1/2 X - G 1/4
